### **EXAMINER'S AMENDMENT**

1. This Office Action is made in response to applicant's amendment filed on 2/13/2008. Claims 1-3, 5-8, and 10-27 are currently pending in the application. An action follows below:
  
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John Eisenhart on 5/5/08.

3. The application has been amended as follows:

Please amend claim 7 to be:

-- A method of driving a plasma display panel (PDP), which displays a predetermined image by arranging a first frame which is displayed for a first frame period and that has a plurality of first weight fields and, and the same time arranging a second frame that is displayed for a second frame period that ha a plurality of second weight fields with brightness weights different from brightness weights of the plurality of first weight fields, the method comprising:

determining whether a frame period is to be varied by varying the timing of the inputted vertical synchronization signals;

varying the first and second frame periods if it is determined that a frame period is to be varied; and

shifting and arranging the first and second frames if it is determined that a frame period is to be varied. --

Please amend claim 16 to be:

-- An apparatus for driving a plasma display panel (PDP), which displays a predetermined image by arranging a first frame that is displayed for a first frame period and that has a plurality of first weight fields, and at the same time arranging a second frame that is displayed for a second frame period that has a plurality of second weight fields with brightness weights different from brightness weights of the plurality of first weight fields, the apparatus comprising:

means for determining whether a frame period is to be varied by varying the timing of inputted vertical synchronization signals;

means for varying the first and second frame period if the determining means determines that a frame period is to be varied; and

means for shifting and arranging the first and second frames if it is determined that a frame period is to be varied. --

Please amend claim 26 to be:

-- The method of claim 7, wherein when the first and second frame period are varied, the total duration of the first and second frame periods is equal to the total duration of the unvaried first and second frame period. --

***Allowable Subject Matter***

4. Claims 1-3, 5-8, and, 10-27 are allowed.

The following is an examiner's statement of reasons for allowance:

The present invention is directed to a plasma display device and method of driving the display for reducing flicker. Independent claims 1, 7, and 16 identify the uniquely distinct features varying the length of first and second frame periods and shifting first and second frames within the varied frame periods. The closest prior art, Shigeta et al. (USPN: 6646625) and Correa et al. (USPN: 6714250) disclose methods of reducing flicker by shifting frames within frame periods but lack varying frame period lengths along with shifting frames within frame periods, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Steven E. Holton whose telephone number is (571)272-7903. The examiner can normally be reached on M-F 8:30-5.
